First hole into Scandinavian hits Reward extension

18 June 2008

ASX Code : HEG, HEGO

The first diamond drill hole (SCD01) into the Scandinavian area has been completed to a depth of 400 metres and has succeeded in intersecting the extension of the Reward mineralisation. SCD01 is the first hole drilled within the village of Hill End and confirms that the Reward mineralisation continues at depth at least 370 metres north of the high grade intersections in previous drilling.

A small amount of visible gold was observed in the Paxton's vein set position at 265 metres and the Phillipson's vein set position at 350 metres down hole.

The vein sets intersected in Scandinavian are interpreted to be a continuation of the main zone of mineralisation in the Hawkins Hill - Reward mineralised corridor and a second hole (SCD02) has commenced to test up dip to the north of SCD01 and beneath the old Scandinavian workings.

If drilling indicates that the Scandinavian mineralisation is potentially economic it could be accessed from the Reward area development.
