

HILL END GOLD LIMITED

ACN 072 692 365

Further high grade underground results

11 September 2008

ASX Code : HEG, HEGOB

- Excellent stope sampling results continue in the Cornelian M2 at Hill End.
- The second 30 metres of sampling run in the (low grade portion) of the M2 initial stope averages 31g/t over a 0.8 metre width.
- Assays for the M2 vein itself include 1037g/t over the 0.2m vein width, 139g/t over 0.5m and 289g/t over 0.3m.
- The 60 metres sampled to date averages 64g/t over 0.8m width.
- A further 20 metres of sampling results in the very high grade north end of the Cornelian M2 are awaited.

Cornelian M2 stope sampling results

Excellent results continue from the initial stope sampling of the Cornelian M2 vein. The next 28 metre long run from 1409N to the north averaged 31.4g/t gold over a 0.8m stoping width, including 1036.8g/t gold over a 0.2 metre vein width, 139g/t over 0.5m and 289g/t over 0.3m.

The attached detailed list of results to date shows the continuity of the very high grade zones in the Hill End mineralisation. While the gold is quite coarse, with ~100% liberation at just under a millimetre size, the gold is well distributed within high grade zones and not spotty like some other deposits. The more even gold distribution increases the reliability of grade estimates based on the sampling results.

Results are awaited for the remaining 20 metres of sampling in the very high grade northern end of the initial Cornelian M2 stope.

Attribution

The information in this report that relates to Exploration Results or Mineral Resources is based on information compiled by Mike Quayle and Philip Bruce. Mr Quayle is a Member of The Australian Institute of Geoscientists and is a full-time geological contractor for the company. Mr Bruce is Fellow of the Australasian Institute of Mining and Metallurgy. Both Mr Quayle and Mr Bruce have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which they are undertaking to qualify as Competent Persons as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves' (The JORC Code). Mr Quayle and Mr Bruce consent to the inclusion in the announcement of the matters based on their information in the form and context in which it appears.
