Underground drilling hits wide high grade zone

17 September 2008

ASX Code : HEG, HEGOB

Further results for previously announced underground diamond drill hole HHUG09 have returned a total intersection of 4.1g/t gold over 17.3 metres (true width) in the Patriarch area of the Reward – Hawkins Hill deposit at 1250N. The wide zone was intersected about 15 metres above the Amalgamated level and includes the M2 – Star of Peace – Middle – Paxtons which make up the Central group of veinsets. The wide zone included consistently high grade veins up to 284.7g/t gold over 0.2 metre in the M2.

HHUG12, which is located 50 metres to the north of HHUG09, also intersected multiple veins with conspicuous visible gold in the M2 position over a similar 17 metre intersection about 15 metres above the Amalgamated level. Assays are awaited.

The wide zone will be tested by three rises up the M2 vein at 25 metre spacing and three similarly spaced cross cut rises which will provide a bulk sample test of this new zone.
