### ASX ANNOUNCEMENT

## Appendix 4C Quarterly Cash Flow Report 31 December 2017

---

**24 January 2018 – Sydney, Australia & Auckland, New Zealand** – Living Cell Technologies Limited today released its cash flow report for the quarter ended 31 December 2017. The Appendix 4C is attached. The company ended the quarter with a cash balance of \$5,247,820 compared to \$6,042,810 in the previous quarter. The decrease is primarily due to ongoing operating payments.

Net operating cash flow in the quarter was \$(775,243) compared to \$(1,385,082) in the previous quarter. Receipts from grants and tax incentives were \$383,731 (previous quarter \$270,027). Operating payments were \$1,223,892 compared to \$1,728,056 in the previous quarter. The decrease is mainly due to no payments for the treatment of patients in the Parkinson's clinical trials during the quarter. Monitoring of patients in the trials continues.

Financing activity receipts were from exercise of employee options.

Chief executive Dr Ken Taylor said that the company is looking forward to analysing the 52-week results for all groups of results in the Phase IIb clinical trial of NTCELL® for Parkinson's disease in May and continuing the pericyte protective agent and other pipeline projects.

– Ends –

### About Living Cell Technologies

Living Cell Technologies Limited (LCT) is an Australasian biotechnology company improving the wellbeing of people with serious diseases worldwide by discovering, developing and commercialising regenerative treatments which restore function using naturally occurring cells.

LCT's lead product, NTCELL®, is an alginate coated capsule containing clusters of neonatal porcine choroid plexus cells. After implantation NTCELL functions as a biological factory, producing factors to promote new central nervous system growth and repair disease-induced nerve degeneration.

The Phase I/IIa clinical trial of NTCELL for the treatment of Parkinson's disease, in New Zealand, met the primary endpoint of safety and halted the progression of the disease two and a half years after implant. Results from this trial were used to design a larger Phase IIb trial to confirm the most effective dose of NTCELL, define any placebo component of the response and further identify the initial target Parkinson's disease patient sub group. This trial commenced in March 2016. The 26 week results of this trial require further analysis and patients will continue to be monitored in accordance with the study extension protocol.

In addition to Parkinson's disease, NTCELL has the potential to be used in a number of other central nervous system indications, including Huntington's, Alzheimer's and motor neurone diseases including amyotrophic lateral sclerosis (ALS).

LCT's proprietary encapsulation technology, IMMUPEL™, allows cell therapies to be used without the need for co-treatment with drugs that suppress the immune system.

LCT has initiated a collaboration with Sir Richard Faull, Centre for Brain research, and Professor Margaret Brimble, The University of Auckland to identify and synthesize a pericyte protective agent that may have potential therapeutic benefit in neurodegenerative diseases. LCT is also doing due diligence on other product opportunities in the field of translational neuroscience.

LCT is listed on the Australian (ASX: LCT) and US (OTCQX: LVCLY) stock exchanges. The company is incorporated in Australia, with its operations based in New Zealand.

### **Forward-looking statements**

This document may contain certain forward-looking statements, relating to LCT's business, which can be identified by the use of forward-looking terminology such as "promising," "probable", "plans," "anticipated," "will," "project," "believe," "forecast," "expected," "estimated," "targeting," "aiming," "set to," "potential," "seeking to," "goal," "could provide," "intends," "is being developed," "could be," "on track," or similar expressions, or by express or implied discussions regarding potential filings or marketing approvals, or potential future sales of product candidates. Such forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause actual results to be materially different from any future results, performance or achievements expressed or implied by such statements. There can be no assurance that any existing or future regulatory filings will satisfy the FDA's and other health authorities' requirements regarding any one or more product candidates nor can there be any assurance that such product candidates will be approved by any health authorities for sale in any market or that they will reach any particular level of sales. In particular, management's expectations regarding the approval and commercialisation of the product candidates could be affected by, among other things, unexpected clinical trial results, including additional analysis of existing clinical data, and new clinical data; unexpected regulatory actions or delays, or government regulation generally; our ability to obtain or maintain patent or other proprietary intellectual property protection; competition in general; government, industry, and general public pricing pressures; and additional factors that involve significant risks and uncertainties about our products, product candidates, financial results and business prospects. Should one or more of these risks or uncertainties materialise, or should underlying assumptions prove incorrect, actual results may vary materially from those described herein as anticipated, believed, estimated or expected. LCT is providing this information and does not assume any obligation to update any forward-looking statements contained in this document as a result of new information, future events or developments or otherwise.
