**About Living Cell Technologies - [www.lctglobal.com](http://www.lctglobal.com)**

Living Cell Technologies (LCT) is developing cell-based products to treat life threatening human diseases. The Company owns a biocertified pig herd that it uses as a source of cells for treating diabetes and neurological disorders. The Company's lead product, DIABECCELL<sup>®</sup>, consists of microencapsulated porcine islets which are implanted into a patient's abdomen using a simple laparoscopic procedure. DIABECCELL is designed to help normalise the lives of people with unstable Type 1 diabetes, especially those suffering from life-threatening episodes of unaware hypoglycaemia (low blood sugar), a dangerous and potentially fatal diabetes complication. The Company entered clinical trials for its diabetes product in 2007 and very encouraging results have been reported to date. There have been no reports of remarkable product related adverse events. For the treatment of Parkinson's disease and other neurological disorders, the company implants microencapsulated choroid plexus cells NTCELL that deliver beneficial proteins and neurotrophic factors to the brain. LCT's technology enables healthy living cells to be injected into patients to replace or repair damaged tissue without requiring the use of immunosuppressive drugs to prevent rejection. LCT also offers medical-grade porcine-derived products for the repair and replacement of damaged tissues, as well as for research and other purposes.
