

8 December 2010

## ASX Announcement

### NORNICO-Greenvale Ni-Co Project (Qld) Drilling Results & Project Update

- Greenvale Phase 2 Drilling Program completed
- Updated resource estimate due by Christmas
- Phase Two drilling Comprised 362 holes (GVM-418 to 779) for 7,693m
- Results received for holes GVM-418 to GVM-625, (results from holes GVM 518 to 625 this report)
- Remainder of assay results for 155 holes due by 14<sup>th</sup> December
- Metallurgical and Beneficiation testwork ongoing

Metallica Minerals Limited (ASX: "MLM") is pleased to announce the completion of the Phase 2 drilling program at the former Greenvale Nickel Mine at the southern end of the Company's wholly owned NORNICO nickel-cobalt and scandium project in north Queensland.

A total of 362 Reverse Circulation (RC) and Aircore holes were completed on the Greenvale deposit for a total of 7,693m between September and December 2010.

These holes were aimed at identifying additional nickel–cobalt resources outside the existing Greenvale resource boundaries at The Edge, Powder Magazine and The Power Line areas and to define resources at Moonscape and other areas of potential high grade nickel laterite mineralisation within the Greenvale pit limits. Drill hole locations for the Phase 2 program are presented on **Figure 2**.

All the drill holes have been surveyed. Satellite imagery to obtain more detailed topographic information has been commissioned. To date, assay results have been received for holes GVM-418 to GVM-625, with results for the remaining 155 holes expected next week.

Work has commenced on updating the Greenvale resource using the new Phase 2 drill data which has been received to date and it is expected that this work will be finalised prior to the Christmas break, after which, pit design and mining studies will commence.

Metallurgical and beneficiation testwork is ongoing and results from this work are due early in the New Year.

Drill hole results for holes GVM418 to 517 have been announced in a previous ASX Release dated the 9<sup>th</sup> of November 2010, highlights from holes GVM-518 to 625 are presented below.

### The Power Line:

GVM 544, 7m @ 1.25% Ni and 0.22% Co (1.69% NiEq) from 0m  
 GVM 600, 14m @ 1.15% Ni and 0.47% Co (2.19% NiEq) from 0m  
 GVM 618, 6m @ 1.28% Ni and 0.14% Co (1.56% NiEq) from 7m  
 GVM 620, 11m @ 1.55% Ni and 0.11% Co (1.77% NiEq) from 32m  
 GVM 625, 14m @ 1.32% Ni and 0.04% Co (1.40% NiEq) from 33m

### The Edge

GVM 556, 2m @ 2.25% Ni and 0.38% Co (3.01% NiEq) from 11m  
 GVM 565, 11m @ 1.49% Ni and 0.08% Co (1.65% NiEq) from 35m  
 GVM 574, 5m @ 1.62% Ni and 0.12% Co (1.86% NiEq) from 43m  
 GVM 582, 5m @ 1.46% Ni and 0.08% Co (1.62% NiEq) from 21m  
 GVM 585, 5m @ 1.46% Ni and 0.15% Co (1.76% NiEq) from 33m  
 GVM 586, 11m @ 1.48% Ni and 0.13% Co (1.74% NiEq) from 10m

### Moonscape

GVM 519, 4m @ 2.59% Ni and 0.03% Co (2.65% NiEq) from 2m  
 GVM 524, 7m @ 1.57% Ni and 0.02% Co (1.61% NiEq) from 0m  
 GVM 528, 9m @ 1.56% Ni and 0.18% Co (1.92% NiEq) from 6m  
 GVM 529, 5m @ 2.50% Ni and 0.02% Co (2.54% NiEq) from 6m

### The Trench

GVM 591, 8m @ 1.66% Ni and 0.03% Co (1.72% NiEq) from 14m  
 GVM 595, 6m @ 1.42% Ni and 0.16% Co (1.74% NiEq) from 11m

Compared to NORNICO'S Lucknow and Kokomo Ni-Co-Sc deposits, the scandium (Sc) content of the Greenvale nickel laterite ores is relatively low. The Greenvale scandium values are typically between 10-80 g/t Sc and average around 40g/t Sc in the Greenvale Ni-Co ore zones.

A complete list of drill hole results for holes GVM-518 to 625 is provided in **Table 3** at the back of this report and the location of all of the holes drilled at Greenvale by Metallica is included as **Figures 2 and 3**.

The Greenvale Mine operated for 18 years from 1974 to 1992, mining ore from a 3 km<sup>2</sup> area, and produced 40 million tonnes (Mt) of nickel laterite ore grading 1.56% Ni and 0.12% Co. Metallica is focusing its current exploration on Greenvale's remnant high grade mineralisation by drilling out known zones of remnant ore and also exploring within the mine area for new zones (partly explaining why a number of drill

hole results in this campaign did not generate significant results (NSR) (Refer Table 3).

The Greenvale Ni-Co Laterite project is located approximately 240km from Townsville in north Queensland and forms part of Metallica's NORNICO Project, see **Figure 1**.

The existing Greenvale Indicated and Inferred Resource (September 2010) stands at 4.5Mt @ 1.12% Ni and 0.08% Co (1.28% NiEq) with a higher grade zone of 1.43Mt at 1.39% Ni and 0.11% Co (1.61 % NiEq<sup>1</sup>). See **Tables 1 and 2** for the breakdown of the resource categories.

## Future Work

New work planned for Greenvale to March 2011 includes:

- Final Greenvale Drill Results (Holes GVM 625 to GVM 779) – expected mid December
- Greenvale and Lucknow resource update – expected late December
- Ongoing Metallurgical and Beneficiation testwork
- Satellite imagery and preparation of topographic model and plans of Greenvale and Lucknow areas
- Progressing mining lease permitting
- Landowner and TLO meetings
- Wet Season environmental baseline studies
- Completion of the revised NORNICO stage 1 Scoping Study (Mark II)

<sup>1</sup> The NiEq value equates to Ni+2Co, this is based on a Nickel values of \$9/lb and a Co value of \$18 / lb, scandium (Sc) has **not** been used in the equivalency equation NiEq equates to

**TABLE 1: GREENVALE Ni-Co RESOURCE**(September 2010, Using a **0.70% NiEq COG**)

<b>CLASSIFICATION</b>	<b>Mt</b>	<b>Ni %</b>	<b>Co %</b>	<b>NiEq %</b>	<b>Fe %</b>	<b>Sc g/t</b>
Indicated	3.2	1.16	0.08	1.31	22.0	35
Inferred	1.3	1.03	0.09	1.21	23.0	39
<b>Total</b>	<b>4.5</b>	<b>1.12</b>	<b>0.08</b>	<b>1.28</b>	<b>23.0</b>	<b>36</b>

The above resource conforms to JORC guidelines for the reporting of mineral resources. The resources have been classed as either Indicated or Inferred based on geological continuity, sample intervals and drill hole spacing. Parts of the resource may be classed as Measured once additional bulk density data has been obtained. The Indicated resource is sufficient for preliminary pit design and scheduling. The Mineral resource estimate is appropriate for a selective open pit mining scenario, but does not account for mining dilution or mining losses.
