## **Voluntary Announcement Successful Tender Results**

This announcement is made by Anton Oilfield Services Group (the “**Company**”, and together with its subsidiaries, the “**Group**”) on a voluntary basis.

The board of directors of the Company (the “**Board**”) is pleased to announce that Anton Oilfield Services (Group) Limited (“**Anton Oil**”), a wholly-owned subsidiary of the Company, has received a notice from the client announcing Anton Oil has successfully won a tender, with a lead in the technical ranking, for the provision of horizontal multistage fracturing services in a block of tight oil and tight gas wells in the Erdos Basin. The award will provide 53 jobs. A contract thereof will be entered into shortly and the contract value is estimated to be over RMB100 million.

This tender involved three types of multistage fracturing techniques, one being the traditional open-hole multistage fracturing technology and the other two new coiled tubing fracturing technologies. Anton Oil won the bid on all three technologies and in particular scored the highest on new coiled tubing fracturing technologies, namely coiled tubing-conveyed resettable packer multistage fracturing and drillable bridge plug multistage fracturing technologies, which takes up the bulk of the orders. Both technologies represent novel fracturing solutions that can provide a full-bore access after fracturing with proven cost savings, and will become key fracturing technologies to be promoted in that market.

The Group is a market leader on horizontal multistage fracturing technology and a pioneer on new coiled tubing applications in China. The new multistage fracturing technologies featured in this successful bid precisely reflects the Group's combined strengths on fracturing and coiled tubing technologies. At the same time, amongst the bidders for this project, the Group was the only technical service provider with its own coiled tubing equipment. The Group had developed, tested and successfully implemented such new technologies with customer endorsement in previous operations. The successful bid marks yet another successful launch of new multistage fracturing technologies by the Group with large-scale application, thereby creating a promising market for the Group.

As there are uncertainties relating to the above project, shareholders and potential investors are advised to exercise caution when dealing in the securities of the Company.

By order of the Board
