

Changshu Power Generation Completes Annual Power Generation Task Ahead of Schedule

As of December 16, Changshu Power Generation completed the annual task assigned by China Power 15 days ahead of schedule. On the 8th of this month, the Company achieved 2.6 million tons of heat supply and reached its annual target 23 days ahead of schedule.

In 2020, Changshu Power Generation coordinated and promoted the production and operation tasks of gas turbine project construction, coal yard closure transformation, enterprise deepening reform, and subsequent development of 300,000 generating units, actively carried out power marketing, deepened user-side auxiliary services, expanded market differentiation competitive advantage, and made every effort to transfer replacement power from 300,000 generating units to one million generating units, so as to further improve power generation efficiency.

While completing the annual power generation and heating tasks ahead of schedule, the Company has also achieved 100 days of continuous safe operation of 9 sub-units, two of which have achieved 200 days of continuous safe operation, and made historically best performance in a number of production indicators.
