

First Off-site Integrated Intelligent Energy Project of Changshu Power Generation Company

On May 7, 2021, Changshu Power Generation Company and Nantong Jingyuan Environmental Protection Industry Development Co., Ltd. formally signed the *Agreement on Integrated Intelligent Energy Investment Cooperation* on the first off-site integrated intelligent energy project of Changshu Power Generation Company.

The Agreement authorizes Changshu Power Generation Company to develop the integrated intelligent energy project located in Jingyuan Ruigu Eco-Technology Park, Nantong City, Jiangsu Province. This is another development breakthrough of Changshu Power Generation Company after the project established in Shaobo Town, Yangzhou City, Jiangsu Province on April 21, 2021. The company's new energy development has crossed the Yangtze River and entered Nantong. After the project is put into operation, Changshu Power Generation Company will provide a complete set of integrated energy services such as supply of cold water, hot water, steam and electricity for the Eco-Technology Park.

In recent years, Nantong City has seen rapid economic growth, with GDP growing against the trend in 2020 and exceeding 1 trillion Chinese yuan for the first time, resulting in strong demand for integrated energy. Jingyuan Ruigu Eco-Technology Park is a key project of Nantong City, covering a land area of over 90,000 m², with a total construction area of over 200,000 m², consisting of a standard production and research area, a functional supporting area, a creator service area and an industrial innovation center, which has high investment value.
