

## CP Guorui Wins Several Awards for Equipment Management and Technology Innovation for 2021

Recently, CP Guorui was awarded the First Prize of 2021 Electric Power Industry Equipment Management and Technology Innovation Achievement Award for its Power Generation By-product Sales Operation Management System. This is a major breakthrough in management innovation, as CP Guorui pursues innovation-driven development and improves management efficiency.

The system is the first of its kind and is based on the idea of "Internet + Sales". After more than half a year of development, more than 10 technical barriers have been overcome, and the whole process monitoring and management of power generation by-product sales as well as information transfer with customers were made available. The system was officially put into operation in July 2017 and has been well received by suppliers and users since its operation.

During the design and operation of the system, several technologies incorporated in the system have been awarded national invention patents and utility model patents. In the future, the system will form a modular and finished cloud service software system and continue to be promoted and applied.
