

## **"Intelligent Remote Hydropower O&M System" Selected as a Case of Technical Achievements by IWA**

Recently, the "Intelligent Remote Hydropower O&M System" developed by Wuling Power Generation Company was included in the demonstration cases of Innovations Hub of IWA. The system will be promoted through social media before and during the World Hydropower Congress in September 2021.

The O&M system has already achieved remote inspection, operation optimization, equipment diagnosis, condition maintenance support, knowledge center, etc. In the future, the Hydropower Industry Innovation Center will continue to explore new remote O&M modes, optimize the functions and reliability of the existing remote O&M system, and provide strong support for the company's safe production.
