

CPID Wins "AAAAA" Titles Awarded by CEC

On October 28, 2021, CEC announced the 2020 outstanding PV power stations and made a grand commendation. Chenguang PV Power Station and Hongtao PV Power Station, two subsidiaries of CPID, were awarded the title of "2020 National AAAAA PV Power Station for Statistic Indicators" and the title of "2020 National AAAAA PV Power Station for Generation Indicators", respectively.

Chenguang PV Power Station is located at the demonstration base of China's PV industry in the coal-mining subsidence area of Datong City, Shanxi Province, and is one of the projects under China's "Top Runner" PV development program. The project investor ranked first among all the candidates, and the project was the first to be completed and connected to grid under the program and won China's Excellent Electric Power Project and Excellent Installation Project awards.

Hongtao PV Power Station is built on an abandoned ash storage yard. After several years of continuous exploration, best practices for safety management and economic operation of PV

power stations have been developed. Skill training and technical transformation have enabled the plan to operate stably. Careful study and evaluation of the economic indicators of power generation have helped achieve the best system operation mode, the optimal equipment operation state and the most economic operation parameter range, and the plant reliability has been optimized with operation performance greatly improved.
