

China Power was Awarded the "2023 National Power Industry Award" for Excellent Typical Cases in Equipment Management

On December 20th, the China Electrical Power Equipment Management Association organized the 2023 National Power Industry Equipment Management Excellent Case Release Conference and the High Quality Development Seminar on New Power System Equipment Operation and Maintenance Management. The implementation of third-party independent quality assurance measures for the maintenance of thermal power units in China stood out among 283 projects applied for in the national excellent typical cases of equipment management in the power industry, and was awarded the "2023 National Excellent Typical Case of Equipment Management in the Power Industry".

China Power has strengthened its control over the maintenance process of thermal power units by implementing a third-party independent quality assurance system for thermal power level maintenance. The overall excellent rate of thermal power units after maintenance has been increasing year by year. This award fully reflects the importance of China Power's implementation of third-party independent quality assurance system in the maintenance of thermal power units, and also fully affirms and recognizes its innovation in planned maintenance management. It will provide new experience and paradigm for equipment management for power enterprises.
