

EVERBRIGHT INTERNATIONAL COOPERATES WITH SUZHOU CITY TO BUILD WORLD-CLASS WTE PROJECT

DRIVING FURTHER SUCCESS WITH ADVANCED TECHNOLOGY

14 June 2016, Hong Kong - China Everbright International Limited ("Everbright International" or the "Group") (HKSE: 00257) is pleased to announce that it has secured the Dismantling, Redevelopment and Upgrading Project ("Suzhou Dismantling and Redevelopment Project") of the Jiangsu Suzhou Waste-to-energy Project ("Suzhou Project" or the "Project").

With a total investment of approximately RMB2.35 billion, Suzhou Dismantling and Redevelopment Project will build 5 new incineration lines each with a daily processing capacity of 750 tonnes. Upon completion of these new incineration lines, the existing facilities at Suzhou Project Phases I and II will be dismantled, while Phase III will be upgraded. The completion of Suzhou Dismantling and Redevelopment Project and the upgraded Project Phase III will bring the daily household waste processing capacity of Suzhou Project to 5,250 tonnes, facilitating Suzhou's fully incineration and recycling on a mass scale so it can cope with the rapid increase in household waste.

The Suzhou Dismantling and Redevelopment Project will be constructed on a BOT (Build-Operate-Transfer) basis for a concession period of 27 years, scheduled to be transferred at the same time as Phase III. Gas emissions will fully comply with the Euro 2010 Standard and it is expected to generate over 820,000,000 kWh of green electricity annually.

Mr. Chen Xiaoping, CEO of Everbright International, said, "Suzhou Project is a landmark waste-to-energy project in China and has received an AAA grade by the Ministry of Housing and Urban-Rural Development. As well as enabling mass incineration of municipal household waste, Suzhou Dismantling and Redevelopment Project will introduce technology which rigorously controls pollution. Upon completion, the plant's annual emissions of pollutants will be more than 10% lower than the approved standard of the Project's previous environmental impact assessment. Suzhou Dismantling and Redevelopment Project will fully adopt the Group's self-developed core technologies including grate furnaces, gas purification systems and leachate treatment systems, etc. After it commences operation, Suzhou Project will become the largest waste-to-energy plant in China."

Mr. Chen continued, "In the past ten years, Everbright International has made great advances in the design and manufacturing of waste-to-energy equipment, making the Group a market leader in China. From relying on technology import in the early stages, the Group is now fully capable of developing technologies through in-house research. By aiming to build a world-class waste-to-energy project, Suzhou Project will once again set the trend in the waste-to-energy industry through its continuous innovation and creativity."

About China Everbright International Limited

China Everbright International Limited focuses on its core businesses in environmental energy, environmental water, greentech and envirotech. These mainly include waste-to-energy, water restoration, biomass integrated utilization, hazardous waste treatment, solar photovoltaic energy, wind power, methane-to-energy, environmental protection engineering, technological research and development, environmental protection equipment manufacturing as well as the planning and construction of environmental protection industrial parks.
