

EVERBRIGHT INTERNATIONAL SIGNS SHANDONG WEIFANG WASTE-TO-ENERGY PROJECT PHASE II

25 July 2016, Hong Kong - China Everbright International Limited ("Everbright International" or the "Group") (HKSE: 00257) is pleased to announce that it has signed a supplementary agreement in addition to its household waste-to-energy project concession agreement with the Weifang Municipal Bureau of City Administration and Law Enforcement in Shandong Province to invest in and construct the Weifang Waste-to-energy Project ("Weifang Project" or the "Project") Phase II. This is the seventeenth waste-to-energy project that the Group has invested in and constructed in Shandong Province.

Weifang Project Phase II will be constructed on a BOT (Build-Operate-Transfer) basis and will be transferred to the government at the same time as Weifang Project Phase I. The total amount to be invested into Project Phase II will be approximately RMB165 million and this phase will have a daily household waste processing capacity of 500 tonnes. It is expected to generate approximately 46,000,000 kWh of green electricity annually, and its gas emissions will fully comply with the Euro 2010 Standard. After Project Phase II is constructed, the total daily waste processing capacity of the Weifang Project will reach 1,500 tonnes.

Mr. Chen Xiaoping, CEO of Everbright International, said, "Weifang's economy is booming and local people's living standards have improved dramatically, but this has led to increased demand for waste treatment and environmental protection. The Weifang Project Phase I has effectively improved the urban environment of the city since it commenced operation in December 2015. With the launch of Project Phase II, we will further promote the harmless treatment, reduction and reuse of local household waste in order to help simultaneously develop the city and improve the overall environment, which will lay a solid foundation for the future economic development of Weifang."

-End-

About China Everbright International Limited

China Everbright International Limited focuses on its core businesses in environmental energy, environmental water, greentech and envirotech. These mainly include waste-to-energy, water restoration, biomass integrated utilization, hazardous waste treatment, solar photovoltaic energy, wind power, methane-to-energy, environmental protection engineering, technological research and development, environmental protection equipment manufacturing as well as the planning and construction of environmental protection industrial parks.
