

## EVERBRIGHT INTERNATIONAL SECURES JIANGSU SIYANG WASTE-TO-ENERGY PROJECT

**13 March 2017, Hong Kong** - China Everbright International Limited (“Everbright International” or the “Group”) (HKSE: 00257) is pleased to announce that the Group has signed a concession agreement for a household waste-to-energy project with the People's Government of Siyang County in Jiangsu Province, and will invest and construct the Siyang Waste-to-energy Project (“Siyang Project”).

Siyang Project will be invested and constructed on a BOT (Build-Operate-Transfer) model with a concession period of 30 years. It has a designed daily household waste processing capacity of 900 tonnes. The project will be constructed in two phases. Phase I of the project has a designed daily household waste processing capacity of 600 tonnes, with a total investment of approximately RMB350 million. Its gas emissions will fully comply with the Euro 2010 Standard, and it is expected to generate approximately 75,000,000 kWh of green electricity annually.

Siyang County is located in the north of Jiangsu Province and is under the administration of Suqian City. Household waste treatment services in the county mainly rely on landfill at present, and with the county's economic development and growth in local living standards, the amount of waste has increased accordingly. With the introduction of waste-to-energy treatment, which provides harmless treatment, reuse and reduction of household waste, to replace landfill which is an unsustainable method, the project will effectively resolve the demand for extensive land resources and environmental pollution problems caused by landfill sites.

**Mr. Chen Xiaoping, CEO of Everbright International**, said, “Everbright International has three waste-to-energy projects in operation currently in the north of Jiangsu Province, which collectively have an annual household waste processing capacity of approximately 700,000 tonnes and generate around 200 million kWh of green electricity each year. The Group will, as always, build and operate the Siyang Project to the highest standards, incorporate the most advanced technologies into the project, and ensure the project’s management abides by the most rigorous standards. By turning waste into energy, Everbright International will contribute towards the protection of Siyang’s environment and the development of its ecological economy, creating another example of how mankind and the ecological environment can harmoniously co-exist.”

**-End-**

**About China Everbright International Limited**

China Everbright International Limited, a flagship company in the industrial investment sector of China Everbright Group Ltd., is listed on the Mainboard of The Stock Exchange of Hong Kong. Everbright International is a leading player in China's environmental protection industry, and the first one-stop integrated environmental solution provider in the country. It leverages talent, science and technology to develop all of its six major business segments, namely envirotech, environmental energy, environmental water (China Everbright Water Limited is listed on the Mainboard of the Singapore Exchange Securities Trading Limited), greentech, equipment manufacturing and international business. It also manages a large number of industry-leading, world-class projects, in the areas of waste-to-energy, water restoration, biomass integrated utilisation, hazardous waste treatment, solar energy, wind power, environmental protection engineering, technological research and development, environmental protection equipment manufacturing, and the planning and construction of environmental protection industrial parks.
