

Wuling Power Generation Company Wins Award for Project Quality

On June 17, 2022, China Electric Power Construction Association announced the Awards for China Electric Power Quality Projects 2022, and Wuling Power Generation Company won the Award for China Electric Power Small and Medium Quality Project 2022 for Phase I of Tongshanling Wind Farm (50 MW) Project. This is the first time that the company has won this award for a new energy project. The award is the highest honor for project quality in China's electric power construction industry, and the comprehensive construction quality of the winners represents the highest level of its kind in China.

Since the commencement of the project, the company had completed the construction with high quality by strengthening control and management of the whole process of project construction, including engineering, bidding & procurement, and construction & commissioning, with special attention paid to organization and acceptance of key works.

In the future, the company will continue to carry forward the craftsmanship spirit of pursuing excellence, apply the valuable lessons learned to future projects, and provide better support for new energy projects.
