

Changzhou Hydropower Plant Holds Fishery Enhancement Activity

On July 4, 2022, under the guidance of Wuzhou Municipal Bureau of Agriculture and Rural Development, Wuzhou Fishery Conservation Center and Wuzhou Fishery Law Enforcement Brigade, Changzhou Hydropower Plant held the 2022 fishery enhancement activity at Sizhou Island Port in Changzhou District, Wuzhou City, and released about 6 million fish fries of eight species into the Xijiang River.

This was the company's 13th year of releasing fish fry. Many public volunteers participated in the activity, and worked together to release the fry into the Xijiang River, contributing to the ecological environment of the Xijiang River.

Bearing in mind the concept of "lucid waters and lush mountains are invaluable assets", the company has been sparing no effort to promote green development, protect the ecological environment of the Xijiang River basin, and create a new chapter of ecology in the Xijiang River basin.
