

Mexican President Visits CPID's Energy Storage Project in Mexico

On February 18, 2023 (Beijing time), CPID's first overseas energy storage project was put into official operation in Sonora, Mexico. The project is an energy storage project supporting CFE's Puerto Peñasco PV Power Station, Mexico's first government-owned solar power project. Mr. Andrés Manuel López Obrador, President of Mexico, attended the completion ceremony of the power station and visited the energy storage project.

Xinyuan Smart Energy Storage Co., Ltd. supplied all the equipment and provided commissioning and technical support services for the energy storage project. The energy storage systems and equipment meet and outperform international standards. Mr. Manuel Bartlett, Director General of CFE, said that the President attaches great importance to the power station's backup systems and battery integration, and the supporting energy storage project as a backup system for the power station would help enhance the reliability of the regional power system.

The completion of the energy storage project marks a great step forward in the international development of emerging industries, and provides a practical example for CPID to expand the overseas markets.
