

Pingwei Power Generation Company Has Generated More than 10 TWh Electricity in 2023

As of 12:00 on June 11, 2023, Pingwei Power Generation Company has generated 10.016 TWh of electricity in 2023, up 4.8% year on year. In the current critical period of power supply, the Company is determined to fulfill its responsibility as a power producer, and all employees are united and working hard to contribute to maintaining power supply.

In 2023, the Company has endeavored to overcome the effects of various unfavorable factors, such as the recurrence of the Covid-19 epidemic, extreme weather and coal shortage, to ensure safe operation and power supply. The Company has made every effort to ensure that the long-term operation of the units after commissioning is fully excellent, and has strongly guaranteed the safe and stable operation of the six units and all PV power stations, and has continued to supply power to the Anhui region and East China power grid.

At present, the Company's six units are working at full load, and with the arrival of the peak supply season, the Company will continue to make every effort to ensure the safe and stable operation of the units and make new achievements in energy supply.
