

China Wireless Received China's 3G Mobile Phone Network Access License

Recently, Coolpad6260 dual-mode smart phone from our subsidiary company--Yulong Computer Communication Technology (Shenzhen) Co., was issued the 3G Network Access License (NAL) for telecommunications equipment by Ministry of Information Industry of P.R.C (MII). The NAL issued shows that China's 3G TD-SCDMA standard formally enters into the commercial usestage, and it really is a milestone of China's TD development. Thus, domestic consumers will be able to use China's real 3G mobile phones this year.

Only two dual-mode mobile phones got NAL this time, and another one is from ZTE (HK: 763). With this NAL for telecommunications equipment, it means Coolpad6260 smart phone receives a legal I.D. in the China's 3G mobile market. Relative experts said the TD NAL will be one of the most important requests for China Mobile (HK: 941)'s next TD terminal tender; and the promulgation of the official NAL also means that the TD terminal tender from China Mobile is going to the last and decisive period. And China Wireless is negotiating with China Mobile about the TD terminal order at present. Coolpad6260, the TD-SCDMA/GSM dual-mode smart phone, has performed better in the stability, operation and function aspects, than the similar products in the testing process before the NAL issued.

At the end, as a pioneer and leader in the global high-end and dual-model smart phone market, Yulong has a leading manufacturing technology in the TD-SCDMA, with the industry's most massive R&D team(more than 1,200); and these years it is repeatedly funded by the Ministry of Information Industry on its 3G R&D.
